Subject Index

- Accommodation dislocation pattern
 experimental observations on the accommodation dislocation pattern for a low symmetry gradient orientation, 75
- Alloys
 interfacial structure of θ precipitates in Al-5wt.%Cu alloys, 153
 low energy cleavage fracture associated with the hydrogen embrittlement of refractory metal alloys, 339
 strain hardening and recovery of nickel Alloy 600 by X-ray measurements of dislocation density, 219
- Aluminium
 deformation structures in lightly rolled pure aluminium, 385
 dynamical response of dislocation structures introduced by twisting deformation of high purity aluminium single crystals, 415
 effect of temperature and amplitude on dislocation structures in cyclically deformed pure aluminium, 231
 interfacial structure of θ precipitates in Al-5wt.%Cu alloys, 153
 stability and transformation of dislocation cell structure in deformed 99.999 wt.% Al, 215
 transition between tangled and polygonized dislocation microstructures in high-purity aluminium studied by internal friction and electron microscopy, 281
- Anisotropy
 correlation between microstructure, dislocation dissociation and plastic anisotropy in ionic crystals, 399
- Annealing
 dislocation structures in γ - γ' interfaces of the single-crystal superalloy SRR 99 after annealing and high temperature creep, 191
 some special types of low energy dislocation configurations in annealed α -Ti single crystals, 185
- Arsenic
 strain-relief mechanisms and nature of misfit dislocations in GaAs/Si heterostructures, 57
- Atomic structure
 atomic structure of 60° and 90° dislocations in Ge/Si systems and critical phenomena, 51
- Brass
 low energy configuration of a superlattice dislocation and the strength anomaly in β -brass, 305
- Brittle crystals
 effect of low energy dislocation structures on crack growth onset in brittle crystals, 327
- Cavitation
 cavitation-erosion-induced microstructures in copper single crystals, 287
- Cell size
 determining subsurface stress distributions in tribological samples from dislocation cell sizes in low energy dislocation structures, 297
 dislocation cell size in a spatially varying stress field of a crack tip region, 373
 mathematical prediction of dislocation cell sizes with strain using the mesh-length theory of work hardening, 367
- Chlorine
 stability of the creep substructure in NaCl single crystals, 161
- Cleavage
 low energy cleavage fracture associated with the hydrogen embrittlement of refractory metal alloys, 339
- Copper
 cavitation-erosion-induced microstructures in copper single crystals, 287
 interfacial structure of θ precipitates in Al-5wt.%Cu alloys, 153
- Corrosion
 triple-line corrosion in high purity nickel, 139
- Crack growth
 effect of low energy dislocation structures on crack growth onset in brittle crystals, 327
- Creep
 dislocation structures in γ - γ' interfaces of the single-crystal superalloy SRR 99 after annealing and high temperature creep, 191
 high temperature creep based on a minimum energy consideration, 177
 stability of the creep substructure in NaCl single crystals, 161
- Crystals
 reactions between crystal dislocations and grain boundary dislocations in near-coincidence boundaries, 95
- Deformation
 deformation structures in lightly rolled pure aluminium, 385
 development of deformation substructures in face-centred cubic metals, 449
 development of the deformed microstructure in commercially pure nickel, 431
 dislocation motion and formation of dislocation structures during *in situ* deformation in a high voltage electron microscope, 409
 dislocation structure due to high temperature deformation in the γ' phase of a nickel-based superalloy, 207
 dislocation structures induced by cyclic deformation in dual-phase ferritic-martensitic microstructures, 259
 dislocation substructures in mild steel deformed in simple shear, 441
 dynamical response of dislocation structures introduced by twisting deformation of high purity aluminium single crystals, 415
 effect of temperature and amplitude on dislocation structures in cyclically deformed pure aluminium, 231
 low-energy dislocation structure in cyclically deformed quench-tempered steel, 237
 stability and transformation of dislocation cell structure in deformed 99.999 wt.% Al, 215

- study of dislocation cell structures from uniaxial deformation of AISI 4340 steel, 421
- theory of plastic deformation:— properties of low energy dislocation structures, 1
- Disclinations
 - triple-line disclinations in polycrystalline material, 129
- Dislocation density
 - strain hardening and recovery of nickel Alloy 600 by X-ray measurements of dislocation density, 219
- Dislocation distributions
 - two-parameter representation of dynamic dislocation distributions, 197
- Dislocation walls
 - impotent dislocation walls, 149
- Dissociation
 - correlation between microstructure, dislocation dissociation and plastic anisotropy in ionic crystals, 399
- Embrittlement
 - low energy cleavage fracture associated with the hydrogen embrittlement of refractory metal alloys, 339
- Epitaxial growth
 - critical thickness during three-dimensional epitaxial growth—a self-consistent approach, 65
- Erosion
 - cavitation-erosion-induced microstructures in copper single crystals, 287
- Fatigue
 - on the onset of low-energy dislocation substructures in fatigue: grain size effects, 267
- Ferrite
 - dislocation structures induced by cyclic deformation in dual-phase ferritic-martensitic microstructures, 259
- Formation
 - dislocation motion and formation of dislocation structures during *in situ* deformation in a high voltage electron microscope, 409
- Fracture
 - low energy cleavage fracture associated with the hydrogen embrittlement of refractory metal alloys, 339
- Gallium
 - strain-relief mechanisms and nature of misfit dislocations in GaAs/Si heterostructures, 57
- Germanium
 - atomic structure of 60° and 90° dislocations in Ge/Si systems and critical phenomena, 51
- Grain boundaries
 - dislocation structures in large-angle grain boundaries in hexagonal close-packed materials, 121
 - reactions between crystal dislocations and grain boundary dislocations in near-coincidence boundaries, 95
- Grain size
 - on the onset of low-energy dislocation substructures in fatigue: grain size effects, 267
- Hardening
 - mathematical prediction of dislocation cell sizes with strain using the mesh-length theory of work hardening, 367
 - strain hardening and recovery of nickel Alloy 600 by X-ray measurements of dislocation density, 219
- Heteroepitaxy
 - misfit dislocations in heteroepitaxy, 43
- Hydrogen
 - low energy cleavage fracture associated with the hydrogen embrittlement of refractory metal alloys, 339
- Interaction potential
 - descriptions of low energy misfit dislocation structures using the parabolic interaction potential, 85
- Martensite
 - dislocation structures induced by cyclic deformation in dual-phase ferritic-martensitic microstructures, 259
- Mesh-length theory
 - mathematical prediction of dislocation cell sizes with strain using the mesh-length theory of work hardening, 367
- Nickel
 - development of the deformed microstructure in commercially pure nickel, 431
 - dislocation structure due to high temperature deformation in the γ' phase of a nickel-based superalloy, 207
 - strain hardening and recovery of nickel Alloy 600 by X-ray measurements of dislocation density, 219
 - triple-line corrosion in high purity nickel, 139
- Polycrystals
 - triple-line disclinations in polycrystalline material, 129
- Precipitates
 - interfacial structure of θ precipitates in Al-5wt.%Cu alloys, 153
- Quenching
 - low-energy dislocation structure in cyclically deformed quench-tempered steel, 237
- Recovery
 - strain hardening and recovery of nickel Alloy 600 by X-ray measurements of dislocation density, 219
- Shear
 - dislocation substructures in mild steel deformed in simple shear, 441
- Silicon
 - atomic structure of 60° and 90° dislocations in Ge/Si systems and critical phenomena, 51
 - strain-relief mechanisms and nature of misfit dislocations in GaAs/Si heterostructures, 57
- Single crystals
 - cavitation-erosion-induced microstructures in copper single crystals, 287
 - dislocation structures in γ - γ' interfaces of the single-crystal superalloy SRR 99 after annealing and high temperature creep, 191
 - dynamical response of dislocation structures introduced by twisting deformation of high purity aluminium single crystals, 415
 - some special types of low energy dislocation configurations in annealed α -Ti single crystals, 185
 - stability of the creep substructure in NaCl single crystals, 161

Sodium

stability of the creep substructure in NaCl single crystals, 161

Softening

low energy dislocation structures produced by cyclic softening, 245

Stability

stability and transformation of dislocation cell structure in deformed 99.999 wt.% Al, 215

stability of the creep substructure in NaCl single crystals, 161

Steel

dislocation substructures in mild steel deformed in simple shear, 441

low-energy dislocation structure in cyclically deformed quench-tempered steel, 237

study of dislocation cell structures from uniaxial deformation of AISI 4340 steel, 421

Strain

mathematical prediction of dislocation cell sizes with strain using the mesh-length theory of work hardening, 367

strain hardening and recovery of nickel Alloy 600 by X-ray measurements of dislocation density, 219

strain-relief mechanisms and nature of misfit dislocations in GaAs/Si heterostructures, 57

Stress

determining subsurface stress distributions in tribological samples from dislocation cell sizes in low energy dislocation structures, 297

dislocation cell size in a spatially varying stress field of a crack tip region, 373

Peierls stress for a wide dislocation, 315

Superalloys

dislocation structure due to high temperature deformation in the γ' phase of a nickel-based superalloy, 207

dislocation structures in γ - γ' interfaces of the single-crystal superalloy SRR 99 after annealing and high temperature creep, 191

Superlattice dislocations

low energy configuration of a superlattice dislocation and the strength anomaly in a β -brass, 305

Tempering

low-energy dislocation structure in cyclically deformed quench-tempered steel, 237

Titanium

some special types of low energy dislocation configurations in annealed α -Ti single crystals, 185

Figure 1. The effect of the concentration of the solution on the rate of the reaction.
